

## SOLVENTS PESTIPUR®

*for pesticides residue analysis*

The control of pesticide residues in the food and environmental sectors is extremely important today.

These substances represent a potential public health hazard. The purity of the solvent is an important factor in obtaining reliable results. It is therefore essential to have products with parameters adapted to this type of application.

To meet these needs, CARLO ERBA Reagents offers its PESTIPUR® line of solvents, specific for the extraction of pesticides and the analysis of chlorinated and nitrogenous residues, even at trace levels.

Our products are prepared according to the most advanced distillation techniques and strictly controlled to guarantee the highest level of quality.

Various functionality tests ensure a stable base line in gas chromatography. For the entire PESTIPUR® line, the absence of critical impurities is ensured by means of precise functionality tests in GC-ECD and GC-NPD.
